

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

We would not for a moment question that where Lafresnaye's material is accredited in the original descriptions to the Paris Museum, or where he was joint author with d'Orbigny in publishing the species of d'Orbigny's Expedition, the true types are those now claimed as such in the Paris Museum. But sweepingly to denounce the alleged types in the Lafresnaye collection as spurious is quite another matter.

Besides, we believe it is not quite true that the Lafresnaye collection was catalogued and labeled by E. Verreaux before it was placed on sale, and that in this way many specimens were indicated as types that were not types. Our information is to the effect that Dr. Henry Bryant purchased the Lafresnaye collection after an examination of it while it was still at Falaise, and not from an inspection of a catalogue; and furthermore that the catalogue was made by Jules Verreaux and not by his brother Eduard, the former being an excellent ornithologist, capable of doing the work with proper discrimination through previous familiarity with its contents, while the latter was merely an intelligent dealer. We are further at liberty to state that for this information we are indebted to Dr. D. G. Elliot, who was in Paris at the time the collection was purchased, and in daily association with Dr. Bryant, and that they were in consultation respecting its value and character.—J. A. A.

Shelley's 'The Birds of Africa.'—Part I of Volume V¹ contains the families Oriolidæ, Sturnidæ, and Corvidæ (species 647-723). The European Golden Oriole (*Oriolus galbula*) is, singularly, the only migratory species of these families met with in Africa, the others being non-migratory. Fifty-seven species of Starlings are recorded, of which three are now extinct, and three are introduced species, two of which are from the Indo-Malay regions, and the other is the common Starling, imported from England into South Africa, and which has become firmly established in and about Cape Town.

The seven colored plates in this part illustrate eleven species, after drawings by Grönvold. It is a pleasure to note the rapid progress of this great work, the scope and character of which have been stated in notices of previous parts.—J. A. A.

Nash's 'Check-List of the Birds of Ontario.'²—The author states: "In the following Check List I have endeavoured to include all the birds which
